

MS SUPPORT GROUP

ALL ARE WELCOME!

Multiple sclerosis causes many different symptoms, including vision loss, pain, fatigue, and impaired coordination. The symptoms, severity, and duration can vary from person to person. Physical therapy and medications that suppress the immune system can help with symptoms and slow disease progression. Join us on the following dates where medical professionals will be providing education and support to individuals with MS and their families.

If you would like to attend any of the dates shown, please advise the PT department. Please provide us with your name, phone number and email address.
